Binarization

Binarization: definition

➤ Binarization consists in transforming numerical features into a binary variable.

➤ Values above a certain threshold are mapped to 1, and values below the threshold are mapped to 0.

Binarization: definition

➤ Commonly used with sparse data (most values are 0).

➤ Data generated from text, like bags of words.

➤ Variables where the great majority of the values are 0.
